

Geospatial & Mobility

Contextualizing the geographical location of people and assets for more efficient operations

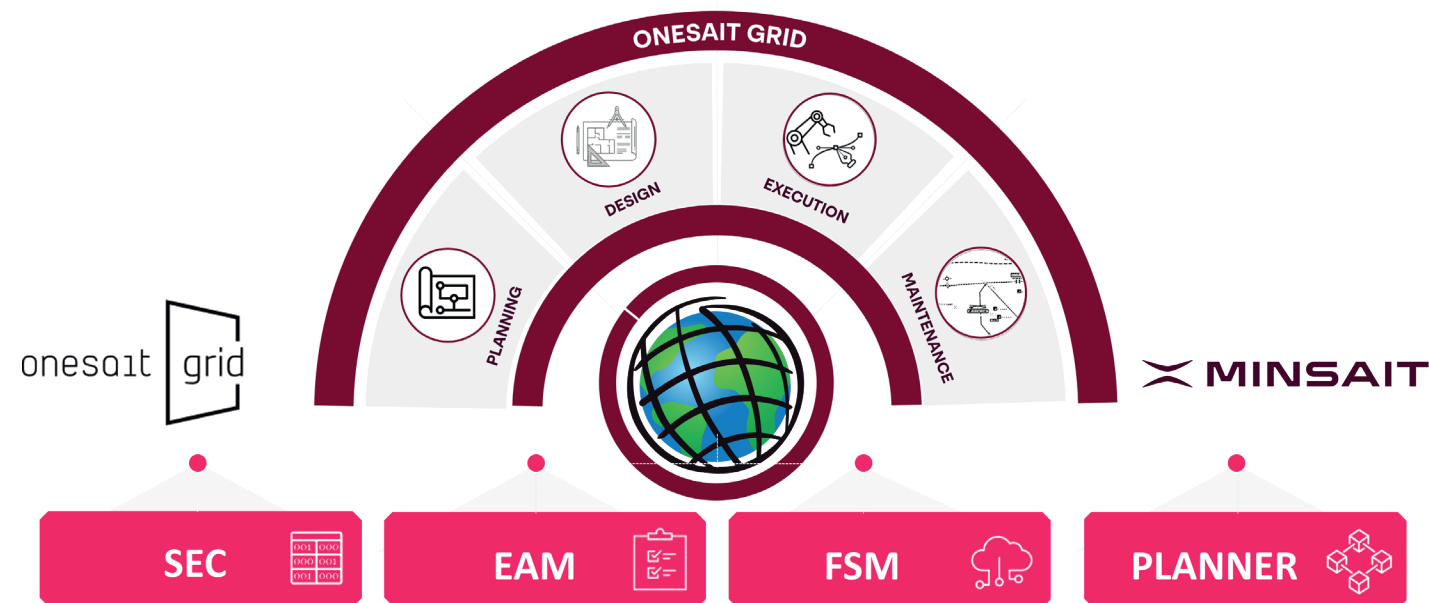

Specialists in the implementation of geospatial products and solutions, combined with mobility tools.

Avoiding getting lost in a hyperconnected world

In a hyperconnected world, where digitization is key for organizations, it is essential to know where things happen, or where my assets are, in order to manage them more effectively. Companies need to:

- Geographically represent their assets, people or events.
- Contextualize their business in the territory to facilitate decision making.
- Reduce operational and maintenance costs in field work.

We work to combine the power of ESRI with our knowledge and experience in Utilities to jointly offer the market a range of products with the best of both worlds.

All your assets under control

We implement geospatial solutions and capabilities focused on the spatial variable and the geographical contextualization of data in areas such as asset and infrastructure management, logistics, or supply and communications networks.

We identify, highlight and contextualize the physical location of people, assets or events, increasing process intelligence and improving decision-making.

ESRI

At Minsait, we have been partners of ESRI for almost 20 years, working and collaborating together to offer our clients the most innovative GIS solutions, tackling complex projects in sectors such as Energy, Telco and Public Administration.

In-house solutions

Business solutions integrated with the ESRI platform

Geographical control panels for decision making

In which to be able to cross-reference business information with the geographical variable for a better understanding of the reality of companies

Visualization and 3D models / BIM – GIS integration

To exploit the full potential of BIM models in a geographical context across the territory.

Field Service Management

Inventorying and geopositioning these elements to obtain a digital twin.

Asset and Infrastructure Management

Inventorying and geopositioning these elements to obtain a digital twin.

Real-time monitoring

Through the tracking of people or vehicles.

Specialized Team

We have a team of more than 80 professionals specialized and certified in GIS technologies, including migration projects to ESRI Utility Network.

Tech for impact

We connect talent,
technology and
businesses to generate
positive and sustainable
growth and impact.
